FLASK + MYSQL

Materi Perkuliahan

- | | | | |
|---|-------------------------------------|----|--|
| 1 | | 8 | Konsep microservices dan Rest API pada Flask |
| 2 | | 9 | Migration Model CRUD Rest API pada Flask |
| 3 | Dasar UI/UX Design, Instalasi Flask | 10 | Penerapan API JWT pada Flask |
| 4 | Integrasi, HTML & CSS Dasar | 11 | Integrasi Flask dan Javascript |
| 5 | Integrasi Flask & MySQL CRUD | 12 | JavaScript Custom Components |
| 6 | Penerapan Session pada Flask | 13 | Presentasi Proyek Besar |
| 7 | Responsi | 14 | Presentasi Proyek Besar |

UTY

MySQL Database

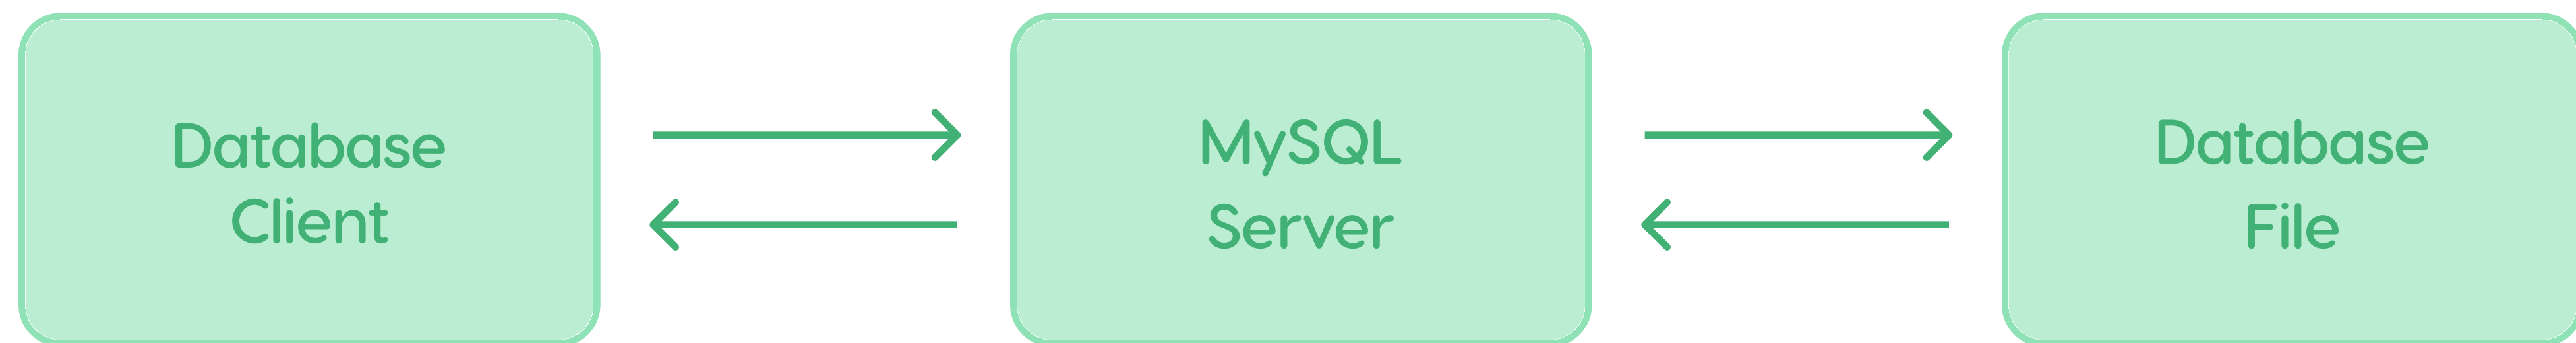

MySQL is an open-source **relational database management system** that uses Structured Query Language (SQL) to manage, retrieve, and manipulate the data stored in relational databases.

UTY

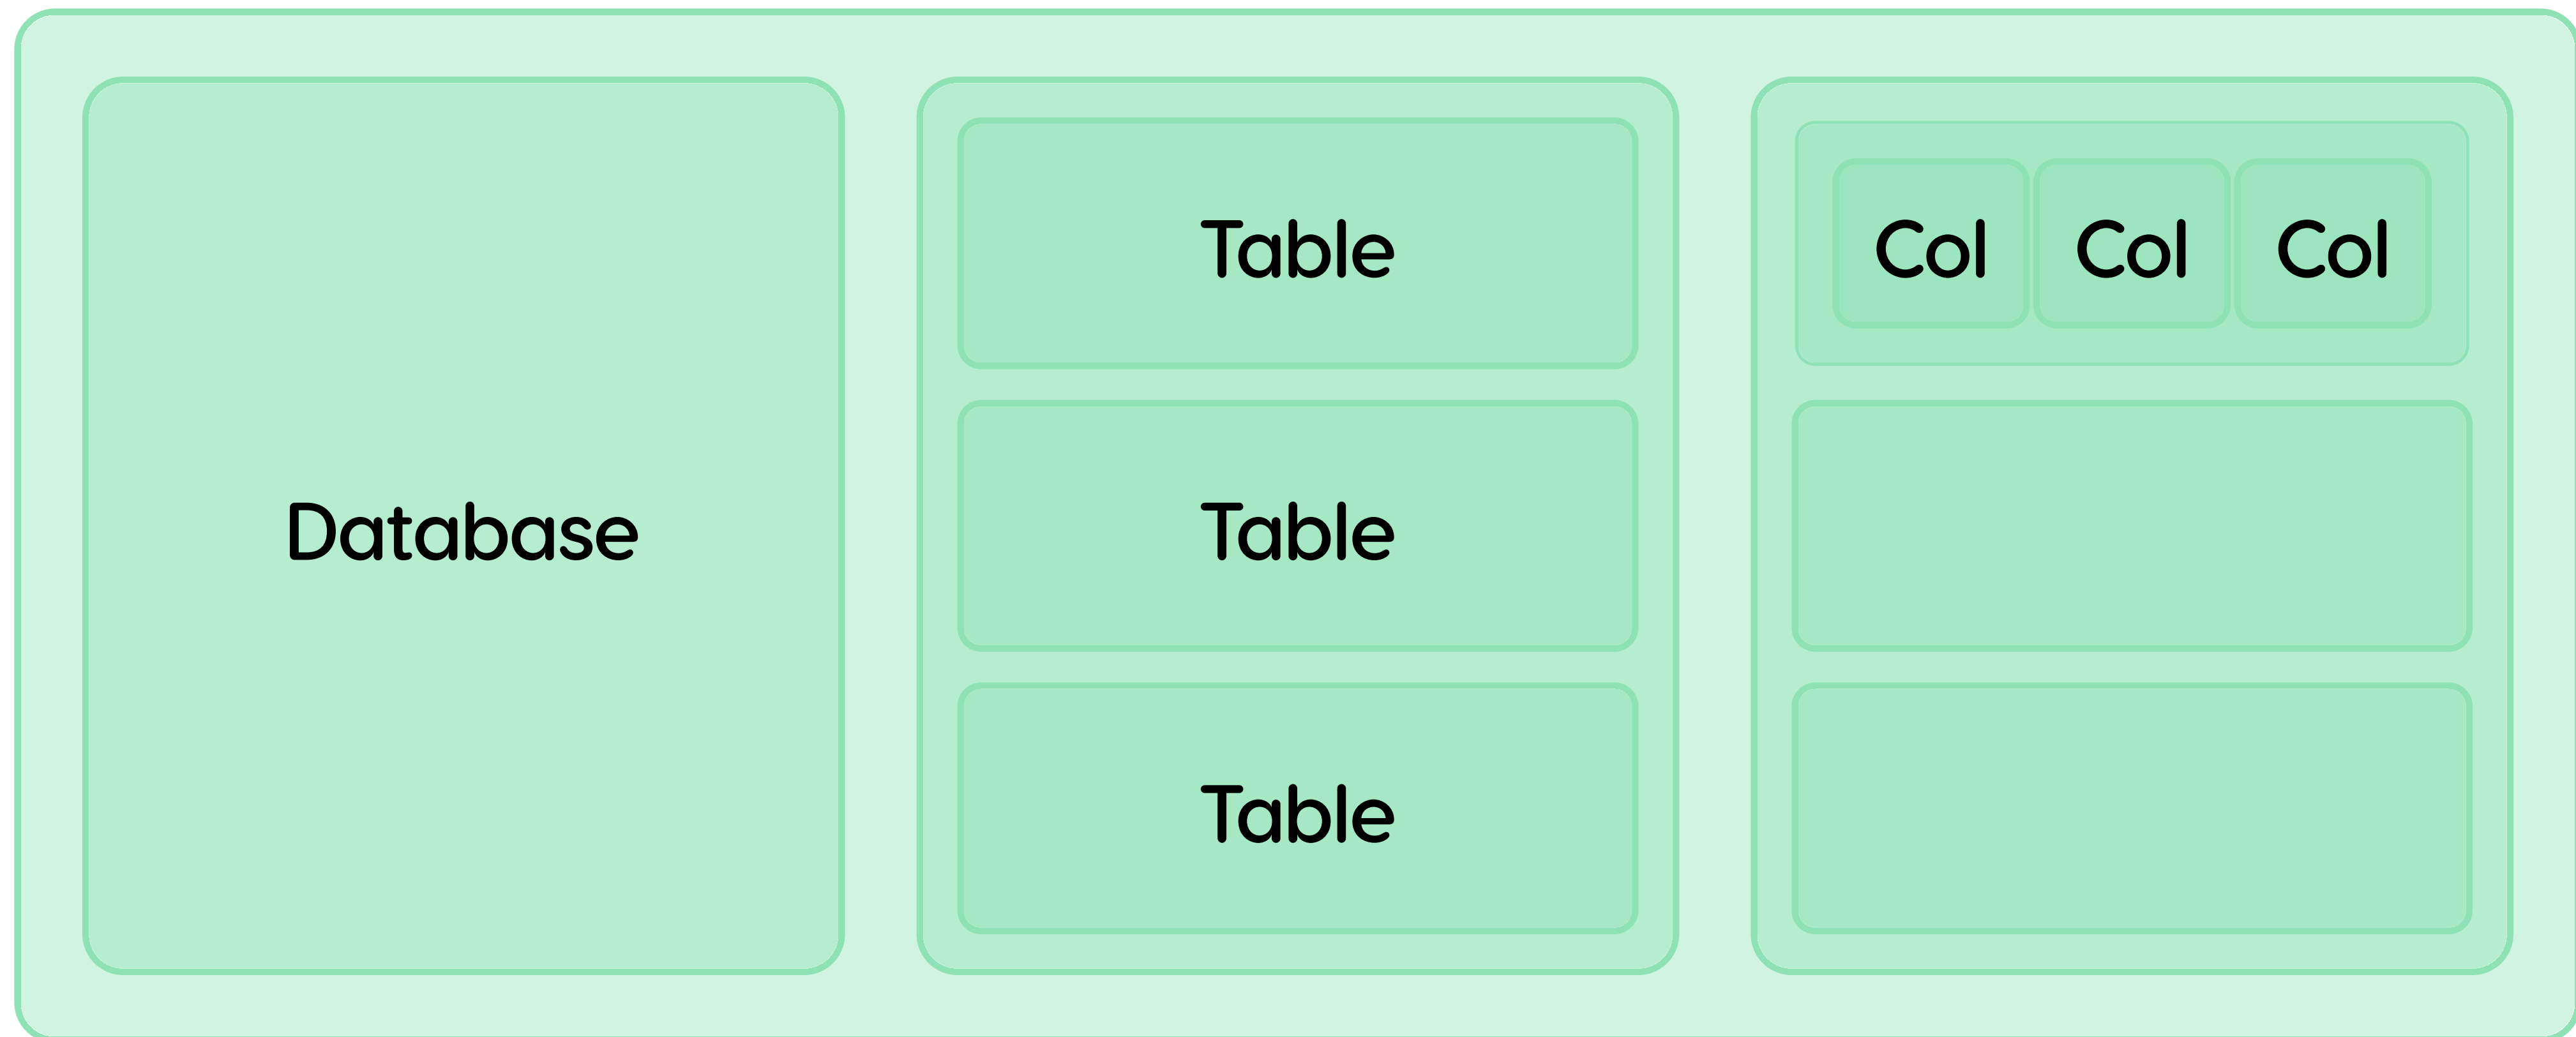

How it works?

DBMS Structure

MySQL

MySQL Flask Integration

```
1 from flask_mysqlldb import MySQL
2 app = Flask(__name__)
3 app.config["MYSQL_HOST"] = "localhost"
4 app.config["MYSQL_PORT"] = "3306"
5 app.config["MYSQL_USER"] = "root"
6 app.config["MYSQL_PASSWORD"] = ""
7 app.config["MYSQL_DB"] = "db_buku"
8 mysql = MySQL(app)
```

Import Package

Configuration

Integration

Read method

Query

```
1 cur = mysql.connection.cursor()  
2 cur.execute("SELECT * FROM books")  
3 books = cur.fetchall()  
4 cur.close()
```

Get all data

Closing connection

Modify data

Query

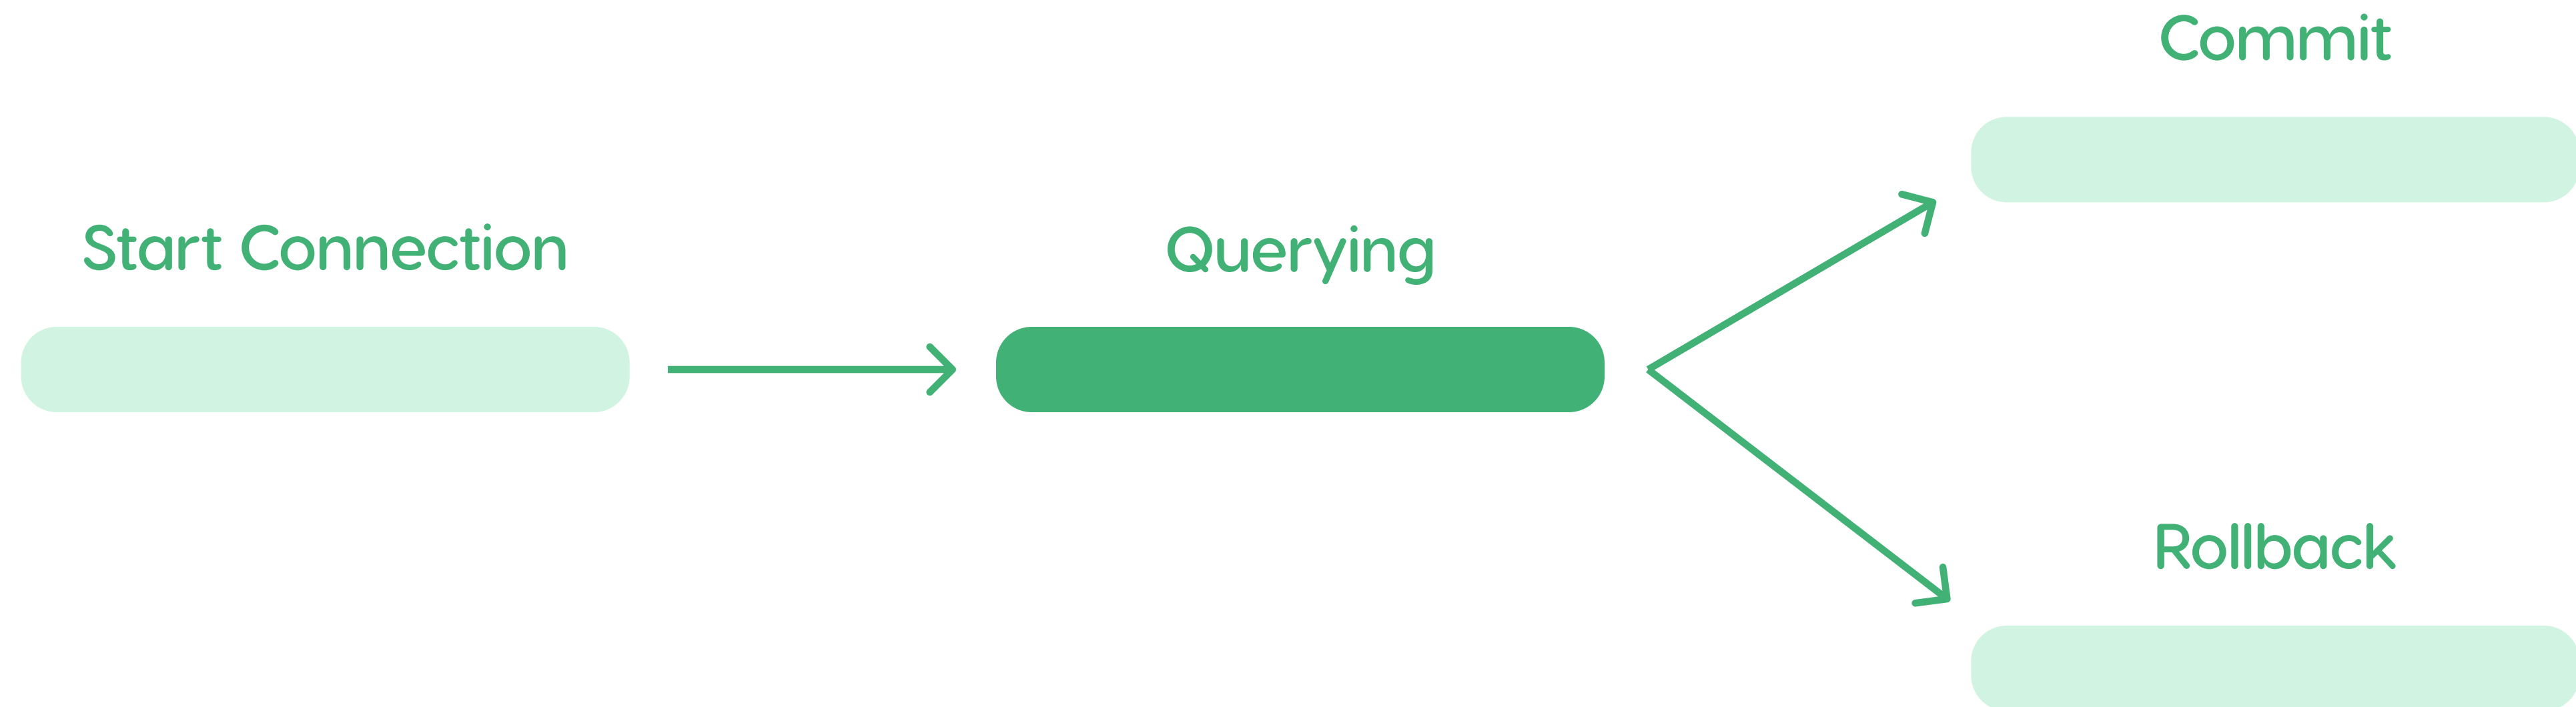

```
1 cur = mysql.connection.cursor()  
2 cur.execute("INSERT INTO books (title, author) VALUES (%s,"  
3 " %s)", (title, author))  
4 mysql.connection.commit()   
5 cur.close()
```

Commit

Closing connection

Transaction Process

***This will help prevent
Database deadlocks**

UTY

Dynamic Website Challenge

Develop a Flask application that manages a simple inventory system for anything you want. The application should allow users to add data, view a list of data, update data details, delete books, and filter the list of data based on criteria (ex. users, category).

Submit on e-learning (soon)
